1. Why We're Redesigning

Deon Tapes Industries Pvt. Ltd. is a B2B manufacturer of pressure-sensitive adhesive tapes serving industries such as automotive, construction, defence & aerospace, electrical, healthcare, and packaging. The company is actively expanding into US, German, and European markets, so the website needs to read as a credible, international manufacturer — not just a local supplier page.

The current site (deontapes.com) is a basic 4-page WordPress/Elementor build: Home, About Us, Products, and Contact Us. It communicates the basics, but it does not have the depth, structure, or credibility signals that international B2B buyers expect before they engage — things like dedicated manufacturing/infrastructure detail, certifications and lab testing detail, a searchable product catalogue, or thought-leadership content.

The redesign restructures the site into 9 page types (expanding to 30+ pages once every individual product page is counted), built around a clearer buyer journey: discover the company → trust the manufacturing & quality story → find the right product → get in touch.

2. Site Structure: Before vs. After

The table below compares the current live site's structure with the new wireframe structure.

Current Site (4 pages)	New Site (9 page types)	What changed
Home	1. Home	Expanded with more credibility sections (see below)
About Us	2. About Us / DEON Journey	Now tells a growth story with a timeline, not just a static bio
— (did not exist)	3. Infrastructure & Manufacturing	NEW — dedicated page to build buyer confidence in the factory
— (certifications were just a strip on Home)	4. Quality Labs & Certifications	NEW — certifications and testing get a full page, not a footer strip
Products	5. Products (hub, by industry)	Adds filtering by industry and product type, pagination
(individual product info was minimal)	6. Product Detail Page (template × 25 products)	NEW — every one of the 25 products gets specs, datasheet download, related products

Current Site (4 pages)	New Site (9 page types)	What changed
— (did not exist)	7. Blog (listing + post template)	NEW — supports SEO and thought leadership, drives organic traffic
Contact Us	8. Contact Us	Adds WhatsApp CTA, map embed, fuller contact detail block
— (no toggle)	9. Language Toggle (EN/HI)	NEW — sitewide control, not a separate page, supports international reach

Net effect: the new structure goes from 4 pages to 9 page types (~30+ pages counting all individual product pages), without changing what the company fundamentally is — it adds the supporting evidence (manufacturing, quality, blog) and machinery (filtering, product detail, language) that a growing international manufacturer needs.

3. What's Staying the Same

To keep the transition low-risk and familiar to repeat visitors, several things are intentionally unchanged:

- The core message and tone — “Tape Solutions That Adhere to Excellence” remains the hero headline.
- The 9 industries served (Automotive, Construction, Defence & Aerospace, Electrical, Healthcare, Packaging, Paints & Carpentry, Renewable Energy, Surface Protection & White Goods) — same list, cleaner presentation.
- The 4 product category highlights (Electrical Insulation, Floor Marking, Masking, Wire Harness) shown on Home.
- The 3 “Our Strengths” points (Factory, Taiwanese Technology, Leading Manufacturer).
- The stats band (OEM brands, monthly capacity, employee count) — this performs well on the current site, so it's kept.
- The 4 certifications (ISO 9001, ISO 45001, ISO 14001, UL) and client logo strip.
- Contact details — Mumbai address, both phone numbers, email.

4. Page-by-Page Explanation

Each page below explains the current state (if it exists today) and what the new wireframe adds or changes.

4.1. Home

Current site: *Has hero, intro, 9 industries, stats, 4 product cards, 3 strengths, 10 client logos, 4 certifications, footer.*

The new Home keeps every section from the current site, in the same order, but tightens the layout and makes the industry cards and product cards clearly clickable entry points into deeper content.

What's changing

- Hero section gets an explicit image/video placeholder alongside the headline and dual CTAs (Contact Us / Explore Products).
- Industries grid becomes clickable — clicking an industry can filter the new Products Hub by that industry (flagged for client confirmation).
- Client Logos and Certifications are split into two distinct strips instead of being merged, so each gets visual weight.
- Footer now links out to the 5 new top-level pages, not just the original 4.

4.2. About Us / DEON Journey

Current site: *Static bio-style page with company description.*

Reframed as a journey/growth story to build emotional connection and credibility with international buyers, rather than a flat “about” block.

What's changing

- Adds a visual timeline: 2016 (Founded) → 2018 (First Expansion) → 2021 (ISO Certifications) → 2024 (Global Expansion: US, Germany, Europe) → 2026 (Future Goals).
- Adds explicit Mission and Vision statements as their own block.
- Adds an optional Leadership/Team section (placeholder only — pending confirmation from the client whether to include this).
- Adds a Manufacturing Capability summary that links out to the new Infrastructure page, rather than repeating factory detail here.

4.3. Infrastructure & Manufacturing

Current site: *Did not exist as a separate page — manufacturing claims were only a few lines on Home/About.*

Brand-new page dedicated entirely to proving manufacturing credibility, which matters most to B2B buyers evaluating a new supplier.

What's changing

- Factory overview with a text block plus an image gallery placeholder (3-4 factory photos).
- Four highlight blocks: Dust-Free Facility, Advanced Machinery, Safety Protocols, Sustainability.

- Production capacity stats reused/expanded from Home (50,000 m²/month, 200+ employees, 25+ product categories).
- Dedicated CTA: “Schedule a Virtual Tour.”

4.4. Quality Labs & Certifications

Current site: *Certifications were a small 4-logo strip at the bottom of Home, with no detail.*

Brand-new page giving certifications and testing capability the depth they need for buyers who require compliance documentation before purchasing.

What's changing

- Full quality control process breakdown (raw material inspection → production monitoring → final testing → packaging inspection).
- Certifications grid in a larger format than Home's strip, each with issue date and a short description (ISO 9001:2015, ISO 45001:2018, ISO 14001:2015, UL).
- New Testing/Lab Capability block describing in-house lab equipment and what it tests for.

4.5. Products Hub

Current site: *A single Products page with limited categorization.*

Becomes a true catalogue hub, letting buyers filter 25 products by both industry and product type instead of scrolling one long list.

What's changing

- Filter by all 9 industries AND by 4 product types (Electrical Insulation, Floor Marking, Masking, Wire Harness) — shown as a sidebar in the wireframe, with top-bar as a flagged alternative for client decision.
- Product grid with image, name, short description, and a “View Details” button per card.
- Pagination and a “Load More” option both shown, with a note flagging this as an open decision.

4.6. Product Detail Page (template, applies to all 25 products)

Current site: *Individual products had minimal dedicated information.*

Every one of the 25 products now gets a full, consistent detail page built from one template, so buyers can self-serve technical decisions without contacting sales first.

What's changing

- Breadcrumb navigation (Home > Products > Category > Product Name).
- Image gallery with thumbnails alongside product title and short description.
- Specifications/TDS table (temperature range, thickness, adhesion, width options, certifications, color options, lead time).
- Downloadable Datasheet/TDS button.
- Tag block showing which industries the product serves.

- Related products row (same category) to encourage further browsing.
- Enquiry CTA — WhatsApp and “Call Sales Team” options.

4.7. Blog (Listing + Post Template)

Current site: *Did not exist.*

Brand-new content engine for SEO and thought leadership, helping the site rank for industry search terms and nurture leads before they're sales-ready.

What's changing

- Listing page: post grid (5-8 initial posts) with image, title, date, excerpt; optional category filter (Applications, Industry Trends, Case Studies, How-To Guides); pagination.
- Post template: title, date/author/read-time, featured image, structured article body, optional author bio block, related posts, and a CTA back into Contact/Products.

4.8. Contact Us

Current site: *Basic contact form and address/phone/email block.*

Adds the channels that match how international and Indian B2B buyers actually prefer to reach out, especially WhatsApp.

What's changing

- Form expands to Name, Email, Phone, optional Industry dropdown (flagged for client confirmation), Message.
- Google Maps embed for the Mumbai office.
- Full contact detail block: address, both sales/support phone numbers, both emails, business hours.
- Prominent WhatsApp CTA button, since WhatsApp integration was specifically called out as a priority.

4.9. Language Toggle (EN / Hindi)

Current site: *Did not exist.*

Not a separate page — a sitewide control supporting the company's international growth and broader domestic reach.

What's changing

- Implemented as a segmented EN | हि switch placed in the top-right of the header on every page, next to the WhatsApp icon, so it's immediately visible no matter which page a visitor lands on.

5. Open Items for Client Confirmation

The wireframes intentionally leave the following decisions open rather than presuming an answer — these need sign-off before visual design begins:

- Whether the industry cards on Home should filter the Products Hub when clicked.
 - Where the YouTube/company video should live — Home hero, a dedicated section, or the About page.
 - Whether the About page Leadership/Team section should be included (not yet confirmed).
 - Whether product filters on the Products Hub should be a sidebar or a top horizontal bar.
 - Whether the Products Hub should use pagination, “Load More,” or both.
 - Whether the Blog category filter is needed at launch (currently optional).
 - Whether the Contact form should include the optional Industry dropdown.
-

6. Next Steps

- Review the wireframe prototype and this document against the open items above.
- Confirm or resolve each flagged decision.
- Move from wireframe (structure) into visual design (colors, typography, imagery) once structure is signed off.
- Begin content collection for the 25 product detail pages and first 5-8 blog posts in parallel, since these are the most content-heavy additions.
