

Wireframe Brief — Deon Tapes Website Redesign

Prepared for: Palak Agrawal **Client:** Deon Tapes Industries Pvt. Ltd.

Platform: Wix Studio **Reference (current live site):**

<https://deontapes.com/>

1. Context

Deon Tapes is a B2B manufacturer of pressure-sensitive adhesive tapes (electrical insulation, floor marking, masking, wire harness, etc.), serving industries like automotive, construction, defence & aerospace, electrical, healthcare, packaging, and more. They're expanding into US, German, and European markets, so the new site needs to read as credible and international, not just a local manufacturer page.

The current site is a basic 4-page WordPress/Elementor site (Home, About, Products, Contact). We're rebuilding it as a much more detailed, structured site with ~30+ pages once you count individual product pages.

Your task: create a low-fidelity wireframe (page layout sketches, not visual design) for each page type below. Think boxes, labels, and content blocks — not colors, fonts, or final copy. Tools: Figma, Whimsical, or even a clean PowerPoint/Google Slides with boxes and labels is fine for v1.

2. Site Map

1. Home
 2. About Us / DEON Journey
 3. Infrastructure & Manufacturing
 4. Quality Labs & Certifications
 5. Products (hub page, organized by industry)
 6. Product Detail Page (template — applies to all 25 products)
 7. Blog (listing page + post template)
 8. Contact Us
 9. Language toggle (Hindi/English) — applies sitewide, not a separate page
-

3. Page-by-Page Wireframe Requirements

Home Page

- Header: logo, nav (Home / About / Infrastructure / Products / Blog / Contact), language toggle, WhatsApp icon
- Hero section: strong headline + CTA ("Contact Us" / "Explore Products"), hero image/video
- Brief company intro (1-2 lines, expandable into About)
- "Industries We Served" grid — icon + label per industry (use existing 9 industries as reference, but lay out cleaner, ideally clickable into filtered product views)
- Stats/numbers band: OEM brands, sq. meter capacity/month,

- employees (keep, this performs well on current site)
- Product category preview: 4 cards (Electrical Insulation, Floor Marking, Masking, Wire Harness) linking to Products page
- “Our Strengths” section: 3 columns (Factory, Taiwanese Technology, Leading Manufacturer) — keep but tighten copy space
- Client logos strip
- Certifications strip (ISO 9001, 45001, 14001, UL)
- Footer: nav links, address, phone, email, social icons

About Us / DEON Journey Page

- Header (same as Home)
- Page hero/banner with title
- Company history/timeline block (founded 2016 → present — leave space for milestone markers)
- Mission/vision block
- Leadership or team section (placeholder — confirm with client if they want this)
- Manufacturing capability summary (can link out to Infrastructure page)
- CTA block at bottom (Contact / Explore Products)

Infrastructure & Manufacturing Page (new — not on current site)

- Hero/banner
- Factory overview text block + image gallery placeholder
- Key infrastructure highlights (dust-free facility, machinery, safety protocols) — 3-4 icon+text blocks
- Production capacity stats (reuse from Home or expand)
- CTA block

Quality Labs & Certifications Page (new)

- Hero/banner
- Quality control process block (text + image placeholders)
- Certifications grid (ISO 9001, 45001, 14001, UL) — larger format than the home page strip, each with a short description
- Testing/lab capability block
- CTA block

Products Hub Page

- Header
- Filter/category navigation: by industry (Automotive, Construction, Defence & Aerospace, Electrical, Healthcare, Packaging, Paints & Carpentry, Renewable Energy, Surface Protection & Whitegoods) AND by product type (Electrical Insulation, Floor Marking, Masking, Wire Harness)
- Product grid — card per product: image, name, 1-line description, “View Details” button
- Pagination or load-more if 25 products on one page
- Sidebar or top filter bar — your call on placement, but flag both options in the wireframe

Product Detail Page (template)

- Breadcrumb (Home > Products > Category > Product Name)
- Product image gallery (left or top)
- Product title, short description (right or below)
- Specifications/TDS block (table format — leave placeholder for spec sheet data)
- Downloadable brochure/TDS button

- “Industries this product serves” tag block
- Related products row (same category)
- CTA: “Enquire about this product” → WhatsApp or contact form

Blog Listing Page (new)

- Header
- Page title/intro
- Post grid: thumbnail, title, date, excerpt — for 5-8 initial posts
- Category filter (optional, flag as optional)
- Pagination

Blog Post Template (new)

- Header
- Post title, date, featured image
- Body content area
- Related posts block at bottom
- CTA block

Contact Us Page

- Header
 - Contact form: name, email, phone, message, industry dropdown (optional — flag for client confirmation)
 - Map embed (Mumbai office location)
 - Contact details block: address, phone numbers (both), email
 - WhatsApp CTA button (prominent, since proposal calls out WhatsApp integration)
-

4. Things to Flag, Not Decide

Palak shouldn’t make final calls on these — just leave a note/comment on the wireframe itself for review: - Whether language toggle sits in header (icon) or as a separate top bar - Whether product filters are sidebar or top horizontal bar - Whether leadership/team section is needed on About page (we haven’t confirmed with Nikesh yet) - YouTube video placement (Home hero vs. dedicated section vs. About page)

5. Deliverable Format

- One wireframe artboard per page type listed above (Product Detail counts as one template, not 25 separate wireframes)
- Label every section/block clearly (e.g., “Hero — headline + CTA”, “Stats band — 3 numbers”)
- Use grey boxes for images, straight lines for text blocks — no real content needed
- Desktop view is priority; if time permits, a simplified mobile view for the Home page only

6. Timeline

Flag your target turnaround here once you confirm with Palak — this brief doesn’t set one.
